
(a) Clean Traffic: SOC Triage Discovery ($\alpha = 0.00$)
Degree heuristic exploits high flooding volume
Botnet Discovery Ratio (% of Active Bots)
Number of Top-Ranked Hosts Investigated (K)
Degree Centrality Heuristic
Q-SPE Attention Readout
Random Investigation
Top-10 Cutoff
(b) Camouflaged Traffic: SOC Triage Discovery ($\alpha = 1.00$)
Degree heuristic vs Q-SPE attention (k=2)
Botnet Discovery Ratio (% of Active Bots)
Number of Top-Ranked Hosts Investigated (K)
Degree Centrality Heuristic
Q-SPE Attention Readout
Random Investigation
Top-10 Cutoff
(c) Malicious Host Attention Mass Allocation
Readout gate mass allocation across traffic conditions
Total Attention Mass on Botnet Hosts (%)
Uniform Volume Baseline (6.25%)
31.12%
2.42%
Clean ($\alpha = 0.00$)
Camouflaged ($\alpha = 1.00$)
(d) Quantum Wavepacket Coordinate Grounding Under Camouflage
Pearson r = 0.015 (p = 1.69e-01)
Learned Attention Activation α_i
Benign Enterprise Hosts
Camouflaged Bot Hosts
Fit: $r = 0.187$ ($p = 3.65e-17$)
Quantum Structural Positional Norm $\|\mathbf{q}_i^{\text{all}}\|_2$
